

# **Integrating Passive Solar Energy to the Climate Control Scheme of a Typical Building Zone to Improve Energy Efficiency**

**Final Report**

**Submitted to Dr. Dagmar Niebur, Dr. Jin Wen,  
and the Senior Design Project Committee of the  
Electrical and Computer Engineering Department  
Drexel University**

Team Number: ECE-27

Team Members:

Steve Crowell	Electrical Engineering
Nicholas Imfeld	Computer Engineering
Kevin James	Electrical Engineering
Justin Lane	Electrical Engineering

Submitted in partial fulfillment of the requirements for the Senior Design Project

**12 May 2004**

## **Abstract**

In order to reduce the consumption of nonrenewable energy sources in buildings, there is a challenge to better utilize renewable energy sources to improve overall building energy efficiency. To meet this challenge, it is proposed in this project to analyze the effects that passive solar energy has on the climate control system of a typical building zone. The objective of this project is to design a local controller for a typical building zone that integrates the use of solar energy (passive solar building zone), to achieve an ideal comfort range based on a predetermined setpoint. The control strategies of interest include classical PID (spell), Optimal Control methods, and Artificial Neural Networks. A Matlab/Simulink model of the building zone is developed and the control algorithms are implemented to maintain the comfort range. An additional  $H^\infty$  adaptive bilinear controller was developed beyond the proposed controllers that successfully met the proposed performance index. Controller performances were analyzed to determine which strategy results in the best performance in a passive solar building. The objectives of this project were met within the budget constraints and within the scheduled time.

## Table of Contents

1.0	Problem Description .....	1
2.0	Course of Action .....	1
2.1	Determination of Solar Building Zone Models .....	1
2.1.1	Non-Linear Model .....	1
2.1.1.1	Incidence Angle Calculation.....	2
2.1.1.2	Cooling Load Calculation .....	2
2.1.1.3	Historical Weather Data .....	2
2.1.2	Linear Model .....	2
2.2	Determination of Control Goals.....	3
2.2.1	Temperature Setpoint Tracking .....	3
2.2.2	Definition of Comfort Level.....	3
2.3	Digital Controller Design .....	3
2.3.1	PID Controller .....	3
2.3.2	Neural Network Controller.....	4
2.3.3	LQR Controller .....	4
2.3.4	H <sub>∞</sub> Controller .....	5
2.4	Matlab/Simulink Implementation .....	6
2.4.1	Building Zone Models .....	6
2.4.2	Controllers .....	7
2.5	Algorithm Comparison and Analysis .....	7
2.5.1	Non-Linear Control Algorithm Comparison .....	8
2.5.2	Linear Control Algorithm Comparison .....	10
2.5.3	Robustness Testing .....	11
2.5.4	Algorithm Implementation .....	12
2.5.5	Future Work .....	12
2.5.6	Conclusions .....	13
3.0	Societal, Environmental, or Ethical Impacts.....	14
4.0	Economic Analysis.....	14
5.0	Schedule.....	14
6.0	Teamwork .....	15
7.0	Summary/Conclusions .....	15
8.0	References .....	15

## Appendices

Appendix A	ASHRAE Internal Load Specifications
Appendix B	Thermal Model Equation Definitions
Appendix C	Equation and Variable List
Appendix D	Constant List
Appendix E	Incidence Angle Calculation
Appendix F	Cooling Load Calculation
Appendix G	State Space Model Calculations
Appendix H	Non-Linear and Linear Simulink Model
Appendix I	PID Controller Design
Appendix J	ANN Controller Design
Appendix K	LQR Controller Design
Appendix L	H-Infinity Controller Design
Appendix M	Non-Linear Comparisons
Appendix N	Non-Linear System Control, Disturbance, Output Analysis
Appendix O	Linear Comparisons
Appendix P	Robustness Testing
Appendix Q	Budget
Appendix R	Schedule
Appendix S	Resumes

## List of Figures & Tables

Figure 1	Open Loop Room Temperature Response: Non-Linear vs. Linear vs. Setpoint.....	7
Table 2	ASHRAE Office Values.....	16
Table 3	ASHRAE Lighting Values.....	16
Figure 4	Simulation Room Model.....	17
Figure 5	Solar Beam Incident on External Window.....	19
Figure 6	Linear Model Simulink Implementation .....	35
Figure 7	Linear Model Simulink Implementation .....	36

Figure 8	Non-Linear Model PI Control Room Temperature Response .....	37
Figure 9	Linear Model PI Control Room Temperature Response .....	38
Figure 10	Simulink PID Controller.....	39
Figure 11	Simulink Block Diagram for Historical Training Data Generation .....	41
Figure 12	Simulink CV Training Block Control Command Output.....	42
Figure 13	Room Temperature Response CV Training Block Control Command Output .....	42
Figure 14	ANN Simulink Block Diagram Framework.....	43
Table 15	LQR State Feedback Gains .....	44
Figure 16	Linear Model LQR Control Room Temperature Response .....	45
Figure 17	Linear Model LQR Control Variable Response .....	46
