# Leo Filippini

**Summary** I am a PhD candidate focusing on charge recovery logic and low-power VLSI systems, with a strong background in analog IC design and layout in deep-submicron CMOS. I have cleanroom and tapeout experience and a sound understanding of transistor level design and device physics.

### Education

Present **PhD candidate**, *Drexel University*, Philadelphia (PA).

**Electronics Engineering** 

2013 **Master Degree**, *University of Brescia*, Brescia (Italy), summa cum laude.

**Electronics Engineering** 

2010 **Bachelor Degree**, *University of Brescia*, Brescia (Italy).

Information Engineering

## Experience

Present **Research Assistant**, *Drexel University*, Philadelphia, PA (USA).

My research is focused on low-power methodologies for VLSI circuits. I am currently investigating novel implementations of charge-recovery logic, power-clock generation, and modeling of such systems.

2013 **Intern**, *Imec*, Heverlee (Belgium).

For my Master's thesis I spent six months designing an integrated transimpedance amplifier for capacitive micromachined ultrasonic transducers (CMUT). Detailed achievements:

- Implementation of the transducer model
- Design of a topology new to the application
- Tape-out in CMOS 180nm

2010 Intern, University of Brescia – Physics Department, Brescia (Italy).

For four months I worked on my Bachelor's thesis: Synthesis and Integration of Quantum Dot Semiconductors in Third Generation Excitonic Solar Cells. Along with my supervisors, we chemically synthesized different types of quantum-dots and built many solar cells. I, in particular, took care of the substrate deposition and characterization, the construction of the cells and their optical and electrical characterization.

## Languages

Italian Native

English Proficient — TOEFL iBT: 107/120
